

Sania Khushbakht Jamil

Technical Product Owner | SaaS Fintech, Payments & Insurance | Software Engineering Background |
Stockholm, Sweden | +46 76 610 97 81 | saniak.jamil@gmail.com | [linkedin.com/in/saniakjamil](https://www.linkedin.com/in/saniakjamil) | saniajamil.com

SUMMARY

Senior technical product owner with BS in Computer Science and 8 years across software engineering, solution delivery and product ownership in regulated insurance and fintech environments. Native Urdu speaker with full professional English. Experienced AI trainer at Mercor, evaluating model responses against detailed rubrics. Each career shift, from engineering to delivery to product, has meant learning the domain fast, naturally leading to using AI daily; building functional prototypes with Claude Code and writing documentation precise enough to train an internal LLM assistant on.

EXPERTISE AREAS

- Product management: discovery, roadmapping, KPI definition, backlog prioritization, agile delivery (Scrum, Kanban, SAFe)
- AI evaluation & tooling: AI-assisted development with Claude Code/GPT, rubric-based response evaluation, structured written feedback, personal assistant running on local LLM at home
- Fintech & payments: Klarna, Adyen, Stripe integrations; subscriptions, chargebacks, fraud detection, dynamic pricing
- Insurance: regulated B2B/B2C insurance and service products, provider integrations
- Software engineering: JavaScript, React, SQL, REST APIs, systems integration, Nodejs

WORK EXPERIENCE

AI Trainer, General Expert (Independent Contractor) — Mercor, Remote

June, 2026 – Present

- Train and evaluate AI models for a top-tier AI lab: assess model responses against detailed rubrics, rank and rate outputs, and write structured feedback explaining each judgment in the general category.

Senior Product Owner, Nexure Sales Platform — Electrolux, Sweden

Sep 2023 – Feb 2026

- Own end-to-end delivery and strategy of a high-volume B2B/B2C sales engine for insurance and service products; Bridging complex business logic and technical execution in a regulated environment.
- Led the V1-to-V2 architecture transition: reduced operational effort by 40%, increased development velocity by 30%, and halved time-to-market.
- Launched a consumer payments platform with Klarna, Adyen, Stripe, and cash payments, alongside B2B integrations with insurance providers.
- Designed an offer/price configurator with dynamic pricing and discounts by channel and campaign offer; improved retention by ~10%.
- Migrated 3 countries in a single quarter and coordinated synchronized 4-country rollouts across EU and North America, aligning engineering, UX, QA, and operations.
- Built working AI prototypes with Claude Code, including a fraud-detection LLM and a chargeback handling tool, to align engineers, designers, and business stakeholders before development, cutting time-to-market.
- Wrote and curated product documentation to train an internal LLM assistant that now answers other product owners' questions about the platform.

Delivery Lead / Transformation Manager, IFS ERP — Munters, Sweden

Oct 2024 – Apr 2025

- Led end-to-end ERP rollout for a Czech manufacturing site; designed a repeatable rollout framework (governance, templates, operating model) later adopted for the Sweden and US implementations.
- Applied process mining to identify bottlenecks and optimize rollout efficiency.

Solutions Engineer / Solution Delivery, Post-Purchase Enterprise Services — Electrolux, Sweden

Sep 2020 – Aug 2023

- Led discovery and integration/solution design to enable appointment booking and payment via the web channel at Electrolux post-purchase area; piloted in one market,
- Coordinated a synchronized 4-country rollout; prioritized the enhancement backlog using KPIs, incident data, and adoption signals. Supported the organization in transformation for 100+ people in the contact center and field service team.

Software Engineer — VentureDive, Pakistan

Jun 2018 – Mar 2020

- Built front-end and back-end features (React, JavaScript, SQL, REST APIs, Nodejs) for healthcare and supply-chain platforms, translating product requirements into technical implementation followed by unit testing.

AI NATIVE PROJECTS

- Tolkarr: A home-server based language model that transcribes and translates subtitles from Swedish to English
- GRIS: An AI agent based news app, which tracks your current and old interests from observing you.
- JobHunt: An extension in the browser that helps you keep track of jobs application process using kanban board.'
- LizardPanic: My first ever attempt at game development where you kill Lizards on the wall.

Note: You can view more details on my website.

CERTIFICATIONS

SAFe Release Train Engineer — Scaled Agile (2023) • IBM Product Owner — Coursera (2025)

EDUCATION

BS in Computer Science — Ghulam Ishaq Khan Institute of Engineering Sciences and Technology, Pakistan (2018) — CGPA 3.44/4.00
